

Lab 01 [Fall 2024] > Making a Web Page with HTML

I. Overview and Objectives

HTML is the base language of all web pages on the internet. It is a pure text language based on elements. Everything between the opening and closing of an element is affected by the element's properties. An element consists of a tag and attributes.

The learning objective of this lab is to become familiar with the language and create a personalized web page.

Reading and related topics: Course slides [Lesson #2](#) and the following online resources:

II. Lab Tasks

Create an autobiographical web page and host it on your CS account. You must use all the specified html elements and only one <div> element. There are no other restrictions. Name your file **lab01.html**.

The required semantic elements usage must be semantically applicable. Here are the elements you must use: <article> <aside> <details> <figcaption> <figure> <footer> <header> <main> <nav> <section> <mark> <summary> and at least one header tag <h1>...<h6>. You can use all the other html elements (<a>

 <table> <audio> <video>...) but only one <div> element. You cannot use CSS but the style attribute inside HTML tags is allowed.

The "retro" look (optional activity):

If you want to give a 1990s "early internet" look, you might want to add a background texture and a midi background music soundtrack.

For background textures, check: <https://ihypress.de/textures/>

To add a MIDI soundtrack, read this tutorial: <https://ihypress.de/midi.php>

III. Submission Guidelines

- This lab is to be done individually.
- You must host your webpage on your CS student account (moon server) making it publicly available (www).
- Submit to D2L the complete webpage in a zip file containing all necessary assets.
- Provide the link to your live page (https://...) in the submission comment section.
- Make sure your TA can fully run your site with just an execution of the URL to the **lab01.html** file and find your hosted webpage.
- Note that if your page is not hosted, you will get a zero grade. The assets alone will not be marked.
- You should submit your lab as soon as possible after your lab session using D2L.
- Submissions will be accepted until **September 25, 2024 at 11:59 PM**. After that, the D2L submission box will become unavailable.

Have fun!
